

BRIZO® FINISHES, MATERIALS, *and* FAUCET CARE

BRIZO®

Materials *of* distinction.

Visible on every surface. Evident in every shade. The mark of thoughtful curation is unmistakable. The Brizo® portfolio offers an array of finishes, natural materials, and accents to express your style. From the gleaming warmth of gold to the cool tones of steel, from classic metals to modern mattes, the selection is exhaustive. Because the finest taste is your own.

Brizo® Finishes

POLISHED

POLISHED CHROME
(PC)

A classic done to perfection. The reflective surface of our Polished Chrome finish channels its surroundings in true-to-color silver tones.

BRILLIANCE®
POLISHED NICKEL (PN)

The ever-shifting balance of *Brilliance®* Polished Nickel takes a slight step toward cooler, more silvery tones—but keeps the traditional brightness and warmth.

BRILLIANCE®
POLISHED GOLD (PG)

Rich and luminous, *Brilliance®* Polished Gold is a quintessential reflection of the golden hue. With warm, rosy undertones and a sleek, even surface, this finish is forever elegant.

BRILLIANCE®
BLACK ONYX (BNX)

With its gleaming polish, alluring dark base, and subtle warm undertones, *Brilliance®* Black Onyx captures a broad spectrum of beauty.

BRUSHED

BRILLIANCE® BRUSHED NICKEL (BN)

Subtle texture. Nuanced hue. *Brilliance*® Brushed Nickel pairs a silver base with warm yellow tones and an exquisitely brushed surface.

BRILLIANCE® STAINLESS (SS)

Versatility meets timelessness in our *Brilliance*® Stainless finish. Its quintessential silver-grey shade and elegant brushed look are eternally of the moment.

BRILLIANCE® LUXE GOLD® (GL)

A muted gold hue. A timeless brushed texture. A perfect balance of warmth and radiance. *Brilliance*® Luxe Gold® is a softened, yet refined take on classic elegance.

BRILLIANCE® LUXE STEEL™ (SL)

Depth and complexity. Shade and intrigue. *Brilliance*® Luxe Steel adds charcoal hues and a brushed effect to classic steel, creating a stunning interplay of darkness and light.

BRILLIANCE® LUXE NICKEL® (NK)

Striking, yet refined. Lustrous, yet balanced. *Brilliance*® Luxe Nickel® feathers delicate satin texture onto soft silver tones, crafting a luminous look akin to stainless steel.

BRIZO®

ORGANIC

MATTE BLACK (BL)

Minimal, yet maximal. Traditional, yet novel. With its striking monochrome presence, our Matte Black finish is undeniably iconic.

MATTE WHITE (MW)

Crisp. Stark. Modern. Bright. Matte White presents an air of high fashion and naturally takes on the tones around it, so it's equally at home in warm or cool contexts.

VENETIAN BRONZE® (RB)

Venetian Bronze® layers saturated brown hues, copper undertones, and a soft-brushed look for an antique effect. Individually buffed, each piece has its own artisan nuances.

LIVING

UNLACQUERED BRASS (ULB)

Our debut living finish, Unlacquered Brass, patinas with use and age. What begins as bright, soft brass deepens to reveal an amber bronze.

BRIZO®

OUTDOOR

316L MARINE GRADE STAINLESS STEEL (SS)

Designed to face the elements—without sacrificing elegance. 316L Marine Grade Stainless Steel holds the classically cool hues of stainless steel. Its timeless aesthetic and weather resistance make it well-suited for the Brizo® Outdoor Series.

Note: 316L Marine Grade Stainless Steel is a solid, uncoated material. It resists weathering better than traditional finishes.

Appearance and Variation

Finishes may appear differently in different settings. Consider the brightness and temperature of lighting, as well as the time of day. Surrounding materials—such as the color of nearby walls, counters, or tiles—may also affect appearance. All of our materials have been tested to meet our high standards for durability and performance.

Please note that product color may appear differently in online renderings, and should only be used as a general guide.

Finish Technologies

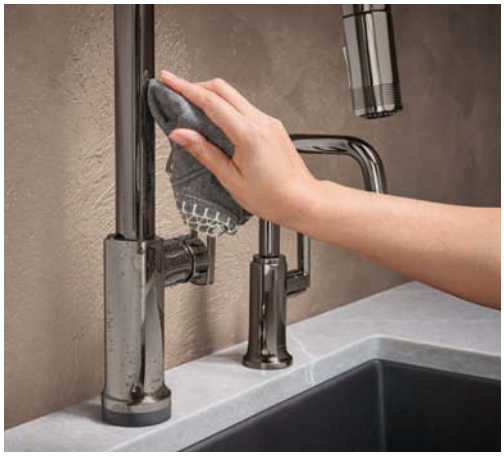

BRILLIANCE® FINISHES

Through a process known as Physical Vapor Deposition, *Brilliance*® Finishes resist corrosion and preserve a like-new appearance. PVD embeds molecules deep into the faucet's surface to create a virtually indestructible bond—resisting abrasions and discoloration for beauty that endures.

LUMICOAT® TECHNOLOGY

Lumicoat® Technology imbues finishes with advanced protection from spots, stains, and buildup. Its ultra-sleek surface resists mineral buildup and hard water stains without altering the appearance of the finish.

BRIZO®

Uncoated Materials

316L MARINE GRADE STAINLESS STEEL

Unlike some other exterior faucets with surface coatings, our outdoor offerings use solid 316L Marine Grade Stainless Steel. Made with iron, chromium, nickel, and molybdenum, this finish has been rigorously tested to withstand the elements—resisting rust, discoloration, and corrosion over time.

UNLACQUERED BRASS

Unlacquered Brass is made of solid brass without a protective coating. Its unsealed surface makes it a living finish—meaning it naturally reacts to its surroundings. Over time, Unlacquered Brass will develop a patina unique to its environment and use. Individual products will age differently as they react to air, moisture, and handling, resulting in a natural variation in color and tone.

Specialty Materials

All natural materials showcase some degree of variation, and every piece has its own color, tone, grain, and texture. For consistency, we've established an acceptable range of variation for each material. While individual parts—such as handles or spouts—may not match exactly, every piece will fall within the approved range.

Acrylic

Delicate and reminiscent of glass, this nearly transparent material is deceptively durable, easy to clean, and built to fascinate.

Cleaning: For regular cleaning, wipe gently with a damp cloth and blot dry with a soft towel.

Black Crystal

Dramatic and delicate. Solid and sparkling. The hints of light that pass through Black Crystal reveal layers of depth and intrigue, while the deep black hue sets a captivating mood.

Cleaning: Wipe gently with a damp cloth and blot dry with a soft towel.

Carrara Marble

Known as Luna marble to the Ancient Romans, Carrara marble comes from the northernmost tip of Tuscany. Its soft white base holds natural clouds and veins of gray, creating a neutral yet distinctive appearance.

Cleaning: Wipe gently with a damp cloth and blot dry with a soft towel.

Concrete

Our ultra-high-performance Concrete accents get their signature tint from pure charcoal, whose natural variations make every piece unique. Embedded fibers and a VOC-compliant sealant deliver impressive durability.

Cleaning: Wipe gently with a damp cloth and blot dry with a soft towel. A void harsh chemicals, which may remove the sealant and expose the raw concrete, causing discoloration over time. Concrete wax may help maintain color and shine.

Glass

Each of three glass varieties—tinted, fluted, and hammered—has its own unique character. Yet all three are equally delicate and tactile, enduring and mesmerizing.

Cleaning: Aggressive chemicals and cleaning can damage the finish. Clean with a mild soap-and-water solution or pH-neutral cleaners. Avoid abrasive or acidic household cleaners, especially those that contain acetone, ammonia, bleach, hydrogen chloride, hydrogen peroxide, or sulfuric acid. Don't use sharp objects, scrubbing pads, or excessive force.

Guyana Teak Wood

Guyana Teak gives our wood accents their rich, warm, reddish brown hue. Hewn from the Basralocus tree, each piece has its own distinctive texture and color.

Cleaning: Guyana Teak is exceptionally durable, naturally hydrophobic. Our teak accents include a protective VOC-compliant sealant for longevity. To clean, wipe gently with a damp cloth and blot dry with a soft towel. Avoid harsh chemicals, which may remove the sealant and expose the raw wood, developing a silvery gray patina over time. A pigmented oil may help restore color and moisture.

Malachite Stone

Bands of bright and dark green form hypnotic patterns in natural Malachite. No two of these stunning gemstones are exactly alike, giving each uncommon charm.

Cleaning: Wipe gently with a damp cloth and blot dry with a soft towel.

Mother of Pearl

A milky white base pairs with silvery blues, pinks, and greens in our mother of pearl accents. Iridescent and intriguing, each sample has its own unique patterns and allure.

Cleaning: Wipe gently with a damp cloth and blot dry with a soft towel.

Faucet Care

Chrome-Plated and *Brilliance*® Finishes

Allowing water to evaporate on your faucet can allow mineral deposits to build up. Wipe dry with cloth for daily maintenance. To remove hard water stains, use mild soap or a 50/50 solution of white vinegar and water.

PVD finishes may naturally darken over time. Restore their vibrance with an isopropyl alcohol wipe and a soft cloth.

Lumicoat® Finishes

Clean with water and mild soap only. Do not use a vinegar solution or other harsh cleaning solutions, as this can damage the protective coating.

Organic Finishes

Organic Finishes, including Matte White, Matte Black, and Venetian Bronze,® are susceptible to sun damage. Avoid exposing these finishes to UV light in order to maintain their original color. Clean with water and mild soap only.
Do not use a vinegar solution or other harsh cleaning solutions.

Uncoated Finishes

Unlacquered Brass: Unlacquered Brass develops a natural patina with time and use. For routine cleaning, use a soft cloth damped with water and, if needed, a mild, non-acidic soap. After cleaning, rinse the faucet thoroughly and dry with a soft towel to reduce spotting.

To brighten the brass' appearance, use a 70/30 (polyester/polyamide) microfiber cloth, plus 3M Marina Metal Restorer & Polish or Simichrome Polish. Periodically apply a Renaissance micro-crystalline wax polish with the 70/30 microfiber cloth to protect the finish and slow the patina process.

316L Marine Grade Stainless Steel: For regular cleaning, use a mild soap solution and a soft, clean cloth. Wipe gently, then rinse with fresh water. Dry thoroughly to prevent water spots.

What To Avoid

Avoid using any of the following on Brizo® finishes and accents:

- Abrasive or acidic polishes and cleaners, such as toilet bowl cleaners, Scrubbing Bubbles® Bathroom Cleaner, Bar Keepers Friend®, Lysol® Basin Tub, Soft Scrub®, and tile cleaner
- Products designed to remove tarnish and rust or containing hydrofluoric, hydrochloric and/or phosphoric acids and caustic agents
- Abrasive or acidic household cleaners containing acetone, ammonia, bleach, hydrogen chloride, hydrogen peroxide, or sulfuric acid
- Sharp objects, scrubbing pads (including green Scotch-Brite™ pads) or excessive force
- Unlacquered Brass: Avoid vinegar and acidic cleaners; bleach or ammonia; lime/calcium removers; and abrasive powders or pads. During installation, avoid contact with grout haze removers, tile cleaners, or other construction chemicals.
